

1 **ABSTRACT OF THE DISCLOSURE**

2 A waterproof splitter box includes a hollow casing with threaded sleeves
3 integrally extending out of the hollow casing, plastic inserts each securely received in a
4 corresponding one of the threaded sleeves, rubber plugs each having a top portion, a
5 mediate portion and a bottom portion which is received in a corresponding one of the
6 plastic inserts, connecting blades each extending into a corresponding one of the plastic
7 inserts and out of the rubber plug which is received in the plastic insert and signal wires
8 each extending and connecting to a corresponding one of the connecting blades for
9 transmitting a signal. The engagement between the connecting blade and the rubber plug
10 prevents moisture from entering the hollow casing so that the transmitted signal is
11 steady.
